

Vintage 2022

MARLBOROUGH KEY FACTS

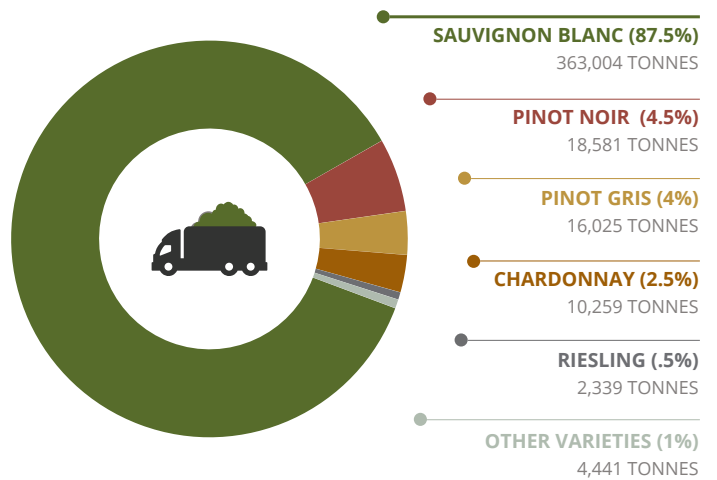

Marlborough's 2022 vintage was "edge-of-your-seat" stuff, with higher yields, inclement weather and the impact of Covid infections on crews.

- A very warm October, November and December meant good fruit set, with berry numbers per bunch well up on average, as well as high berry weight. But a cold and wet February meant flexibility was key to getting through a harvest beset by a lack of skilled labour, the impact of Omicron and the pressure of February rain.
- Yields were significantly up on the long-term average, putting companies back in balance after the light 2021 harvest.
- The Waihopai Valley subregion was a good performer this year, with later ripening blocks that benefitted from stunning late harvest weather, with the Awatere Valley also providing good yields and flavours.
