

Vintage 2021

MARLBOROUGH KEY FACTS

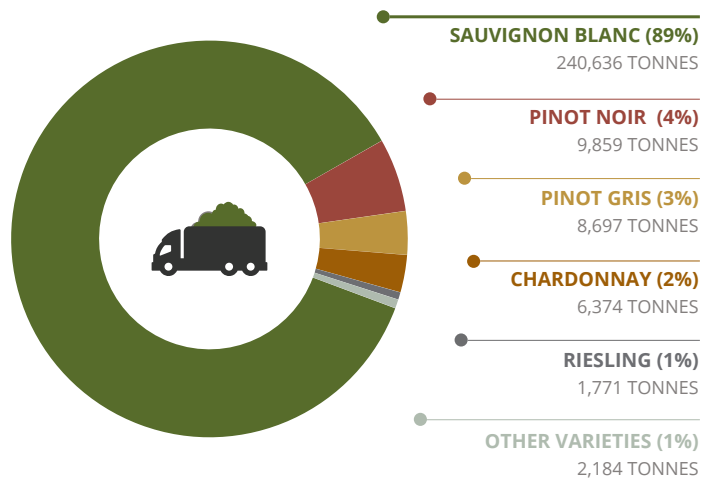

The 2021 harvest won't only be remembered for light and lovely crops, but also the earliest ever harvest finish for many companies.

- Lower yields were due to a variety of factors, including inclement flowering conditions, with Marlborough temperatures mostly lower than average from mid-November to the first week of December.
- A late frost on September 30 last year coincided with early bud-burst for Sauvignon Blanc in some parts of Marlborough.
- Crops ranging from extraordinarily light through to fairly light, promise wines of great intensity and balance.
- International workers were locked out by Covid-19 border closures, but wineries recruited and trained new people to ensure excellent operating plans for a safe harvest.
